

MSR heavy-duty ceiling systems

wall-to-wall

MSR wall-to-wall heavy-duty ceiling systems are customized heavy-duty ceiling constructions that represent the perfect solution for either immediate or future equipment.

Features:

- Heavy-duty ceiling systems from wall to wall with support profiles (quantity depending on grid and room size). Point loads from 3 kN up to 60 kN are possible.
- Aluminium bracket for the ceiling plate RAL 9016 inside and outside (no simple metal angle plate)
- Aluminium coverings strips RAL 9016 as a hygienically seal in a visually pleasing way for the bottom groove
- Ceiling tiles according to customer specification. If sharp-edged mineral fibre tiles are used, the intermediate bar MSR-AD5 also has to be used
- Standard suspension depth: 1 m (larger suspension depths on request)
- Alternatively height-adjustable suspension points
- Optional: detailed work plan
