

## Floor plate

The MSR floor plate serves as an adaption between x-ray machine or patient table and unfinished floor. Accurate calibration according to the medical device manufacturer is what we do, day by day.

After appropriate adjustment, the floor plate including substructure will be fixed with heavy-duty anchors and following customer requests grouted with non-shrinking, early strength grout.

The delivery and adjustment of screed-flush, removable floor duct systems can also be performed by MSR.
